

## **Waterline Alternative Energies & Seacoast Volkswagen of Greenland, NH Install First Wind Turbine at New Hampshire Car Dealership**

**December 10, 2009 Seabrook, NH:** Waterline Alternative Energies, an affiliate of Waterline Industries Corporation, a leader in water and wastewater construction for the last 2 decades, is pleased to announce their joint effort with Seacoast Volkswagen of Greenland, NH to install the first wind turbine at a New Hampshire car dealership site. The project broke ground on Monday, November 23<sup>rd</sup> and was completed on Thursday, December 10<sup>th</sup>.

Waterline Alternative Energies utilized their own staff of licensed electricians and installers to ground-mount a 2.5KW vertical axis Helix Wind™ turbine at the dealership location off Route 33, replacing an existing Volkswagen light tower. The lighting was re-installed on the wind turbine pole. Not only is Seacoast Volkswagen aesthetically enhancing their building location, but they will be reducing their carbon footprint, demonstrating their commitment to the environment. In addition to the recent wind power project at the dealership, Seacoast Volkswagen's service shop has taken all available steps to minimize and halt its hazardous waste generation.

“Seacoast Volkswagen has a long history of supporting clean and renewable resources from recycling our wash bay water to participating in the Energy Star program. We are proud to be the first automotive application of wind turbine technology in the state, and look forward to increasing our use of renewable clean energy sources.” – Doug Miles, General Manager Seacoast Volkswagen

“Waterline is thrilled to be part of this project. The initiative taken by Doug Miles is one that we hope other area business owners will adopt. This proves that renewable energy is feasible and provides multiple levels of benefits that significantly outweigh the cost. Seacoast Volkswagen is well-known as an environmentally conscious organization, and this will further emphasize that dedication. Our hats are off to Doug for having the foresight to make this decision, and for showing his commitment to the local environment and economy.” – Jeff Haydock, Director of Sales, Waterline Alternative Energies

### **About Waterline Alternative Energies**

Waterline Alternative Energies is a New England based designer, distributor and installer of renewable energy solutions, serving the demand that is generated from homeowners, municipalities, and businesses. Committed to providing renewable energies that are proven and cost effective, Waterline Alternative Energies offers renewable solutions including solar, wind and hydro systems. Waterline Alternative Energies is with you every step of the way, from initial site evaluation to final installation. With the use of their own licensed electricians and installers, they guarantee realistic schedules and successful project deployment.
