**Subject:** Solar Hot Water:

Dear Sir / Madam,

I am writing you for a clear understanding on what you are proposing to use the NH renewable energy fund for. I think part of the renewable energy fund should go to a solar hot water program because utilizing solar energy to heat water is 100% more efficient than using solar energy to generate electricity. The folks at NHSEA are saying they you folks want to keep part of the fund to develop your own P.V. generating plant. You should clarify this to the people and businesses of NH.

Part of the renewable energy fund in NH should be put aside for solar hot water. Thank you.

Have a good day,

Paul Soucy
