

DE 10-024

If I understand this attachment correctly there would be 600,750,900 dollar Rebate depending on the number of collectors, and a 1,500, 1,700, 1,900 rebate based on the size of the system. These are rebates to be applied to from the State. Are there any requirements as to percentage of annual use as is true with solar panels ?

This is in addition to the opportunity to itemize 30 % of the system cost for tax credits on our Federal income tax.
