Re: DG 12-068, Northern Utilities, Inc., Summer 2012 Cost of Gas Filing

Dear Attorney Speidel:

On behalf of Northern Utilities, Inc. ("Northern"), please find enclosed Northern's responses to the New Hampshire Public Utilities Commission Staff's First Set of Data Requests numbered Staff 1-1 and Staff 1-3 by Christopher A. Kahl, George H. Simmons and Francis X. Wells in the above-referenced docket.

If you have any questions, please do not hesitate to contact me.

Very truly yours

George H. Simmons Jr.

Enclosures

Date Request Received: 04/06/12 Date of Response: 04/16/12

Request No. Staff 1-1 Witness: Francis X. Wells

Request

Re. Chris Kahl's testimony, page 7, beginning at line 6, and Schedules 1A and 21 of the COG filing.

- a. Describe the primary factors that have caused the company to change the annual fixed costs from the MPR (Schedule 21), normally set with each peak COG filing, have been revised in this off-peak filing.
- b. Provide a summary of a) how actual fixed demand costs have been allocated between the two divisions each month, beginning with November 2011 supply resource invoices, b) how actual fixed demand costs will be allocated between the two divisions after the change, and c) when this change in allocations will occur.
- c. Re. Schedule 1A, page 2, line 76. The annual Cap. Rel. and Asset Mgt. credits, net of PNGTS expense of \$2,405,780 does not match Schedule 21, Lines 88 + 89. Explain why the amounts are not the same. Should Schedule 21, line 90 also be included in this amount in Schedule 1A, line 76?
- d. Provide details of specific costs and credits that contribute to the increase in Schedule 1A, line 76, from \$1,612,415 (revised peak period COG filing in DG 11-207) to \$2,405,780 in the current off-peak COG filing

Response:

- a. Northern elected to update its annual demand cost forecast for the period November 2011 through October 2012 due to updated information on TransCanada demand tolls. Specifically, the Canadian National Energy Board approved 2012 Interim Tolls at the 2011 Final Tolls rate, reflecting projected lower annual demand costs equal to \$1.9 million on a total company basis. The purpose of the annual demand cost forecast update is to recalculate the allowed demand cost recovery for the 2012 Summer COG to account for the lower expected TransCanada demand costs. The Northern rate model is unable to recalculate the allowed demand cost recovery for the summer period without also recalculating the MPR.
- b. Fixed demand costs are allocated to the 12 months of the year by the PR allocator which is established in the prior Winter Season Cost of Gas (COG) proceeding. For the period November 2011 through October 2012, the allocator

Date Request Received: 04/06/12 Date of Response: 04/16/12

Request No. Staff 1-1 Witness: Francis X. Wells

was derived in the 2011/2012 Winter Season COG; 52.62% for the Maine Division and 47.38% for the New Hampshire Division. However, due to the lag between the activity and billing periods, November 2011 invoices are based on October 2011 activity and, therefore, on the prior year's PR allocator. A summary of the allocation of demand costs for November 2011 through March 2012 is provided in Attachment Staff 1-1 at Line 20. For May 2012 through October 2012, there is no change to the PR allocator.

- c. The sum of Lines 88 and 89, on Schedule 21, equals (\$2,065,226). This credit represents the total amount of capacity release and asset management revenue expected during the Winter Period. The amount listed on line 76 of Schedule 1A, (\$2,405,780) represents the amount of capacity release and asset management revenue net of PNGTS litigation costs to be recovered from sales customers only during the Winter Period. Thus, these amounts will not be the same due to the assigned portion of these revenues and costs to third party providers. In the 2011/2012 Winter Period filing, this is illustrated in Schedule 1A, page 6 of 6. However, in the 2012 Summer Period filing, page 6 in Schedule 1A is not included in the filing because capacity release revenues are not collected in the Summer Period.
- d. The amount listed on Line 76 of Schedule 1A is incorrect. It should be the same as the amount shown in the 2011 /2012 Winter Period filing, (\$1,612,415). However, as mentioned above, because this is the Summer Period, this discrepancy has no impact on the cost of gas.

Northern Utilities, Inc. Gas Supply Demand Allocation Summary Invoices Paid since November 1, 2011

Request No. Staff 1-3

Date of Response: 04/16/12 Witnesses: Christopher A. Kahl and George H. Simmons Jr

Request

Re. Kahl testimony, pages 16-18. Allocation adjustments related to company managed resource cost allocations between Northern's Maine and NH divisions.

- a. Provide supporting data and documentation for the adjustments line in Schedule4, page 1, of the 2011 Off-Peak COG reconciliation.
- b. Have these adjustments been audited by either the Maine or NH PUC audit staffs?
- c. Provide additional background related to when this first became a cost allocation issue, how and when it was discovered. Include the referenced Nisource written instructions to Unitil related to cost allocations between the Maine and NH divisions.
- d. Provide data and spreadsheet analysis showing the historical cost allocation errors by month and the overall impact on cost of gas rates to Northern's NH division. Include the dollar amount and time frame that Northern proposes to pay back to NH rate-payers the costs related to this cost allocation error.

Response:

- a. Attachment Staff 1-3 (a) includes support for the monthly Allocation Adjustments appearing in Schedule 4, page 1, of the Revised 2011 Summer Season COG Reconciliation. For the 12-months ended October 2011, these monthly Allocation Adjustments total \$10,385.
- b. The NH PUC Staff is currently auditing Northern's New Hampshire Division Revised 2011 Summer Season COG Reconciliation which includes specific monthly Allocation Adjustments. The ME PUC Staff has completed its review of Northern's Maine Division 2012 Off-Peak Period CGF Filing. That filing includes the Company's Revised 2011 Off-Peak Period CGF Annual Reconciliation which includes similar, but opposite, Allocation Adjustments totaling (\$10,385).
- c. Before beginning the complex task of integrating specific data from the NiSource to Unitil accounting systems, due to differences in software, personnel and accounting practices, NiSource forwarded and explained to Unitil specific instructions on how to account for various items in going from bills to books,

Date Request Received: 04/06/12

Request No. Staff 1-3

Date of Response: 04/16/12 Witnesses: Christopher A. Kahl and George H. Simmons Jr

including the recovery of Northern's gas costs. These instructions are included as Attachment Staff 1-3 (b), "Northern Utilities Revenue – From Bills to Books". As shown on page 10 of these instructions, "Company Managed volumes from invoice detail (should include) NH (volume) only". Since acquiring Northern, Unitil has followed these instructions.

During Spring 2011, Northern began questioning why the monthly divisional commodity cost allocator included only NH Company managed volume. In researching this issue, it was discovered monthly Allocation Adjustments to commodity costs in annual Cost of Gas reconciliations had been previously discussed/submitted in the 2008 Peak/Winter Period/Season CGF/COG filings made by NiSource to the Maine/New Hampshire PUCs before the sale of Northern to Unitil. See Attachment Staff 1-3 (c), Transcript from the Maine PUC proceeding at pages 45-64. Based on this investigation, Northern concluded the NiSource instructions were outdated, and in November 2011, Northern began including Company managed volumes for both divisions in its monthly commodity cost allocator in order to appropriately assign the Company's commodity costs between the Maine and New Hampshire Divisions. The reason for this adjustment is as follows:

Basically, Northern's gas supply and related commodity contracts serve both Divisions. Each month, the associated commodity costs by contract are aggregated and assigned to the Divisions based on their respective current or prior month sales volume adjusted for Company use and lost and unaccounted for volumes. Company managed sales are made using Northern's gas supply commodity contracts. Thus, Company managed sales volume from both Divisions should be included in the derivation of the Company's monthly commodity cost allocator to better track cost causation. Further, as shown on page 11 of the NiSource instructions, Unitil was instructed to include in its gas cost recovery mechanism revenue from Company managed sales. Since Company managed revenue dollars are credited to Division-specific commodity gas costs, then it is fair and equitable to include Company managed sales volume for both Divisions in the monthly commodity cost allocator.

d. As stated in response to c, above, since November 2011, Northern has included both New Hampshire and Maine Division Company managed volume in the derivation of its divisional monthly commodity cost allocator. Thus, on a goingforward basis, there is no need for future monthly Allocation Adjustments related to this issue. However, because the upcoming 2011-2012 New Hampshire Division Winter Season COG Reconciliation to be submitted in July 2012 will

Date Request Received: 04/06/12

Request No. Staff 1-3

Date of Response: 04/16/12 Witnesses: Christopher A. Kahl and George H. Simmons Jr

include the period May 2011 through April 2012, the Company's preliminary analysis at this time expects to include Allocation Adjustments for the months May 2011 through October 2011 totaling \$8,288. See Attachment Staff 1-3 (d).

As requested by the NH PUC Staff at the April 9, 2012 technical session in this proceeding, for the 2010-2011 Winter Season COG Reconciliation, an overall Allocation Adjustment impact of (\$1,904,666) for the May 2010 through April 2011 period would have been included in the derivation of Northern's New Hampshire Division COG gas rates if the monthly divisional commodity cost allocators included Maine Division Company managed volumes. See Attachment Staff 1-3 (e).

Northern's proposal in this 2012 Summer Season COG proceeding is to include monthly Allocation Adjustments in its 2011 New Hampshire Division Summer Season COG Reconciliation of \$10,385. The Company is not proposing to make any other adjustments from more distant, prior and accepted Summer (or Winter) Season COG Reconciliations using the updated method of allocating monthly commodity costs to the divisions. This proposal is consistent with prospective seasonal rates reflecting adjustments for expenses/credits applied during the reconciliation of the prior year's respective season.

Northern Utilities Revenue - - From Bills to Books

NH – THERMS on Financial Statements in DTH

ME - CCF on Financial Statements in MCF

Customer Types

- Residential single family dwelling
- Commercial single meter in commercial activities: apartment buildings, offices, stores, schools, hospitals, etc.
- Industrial using gas primarily in a process which involves extraction of raw materials through use of heat, etc. (Manufacturing)

CIS (Customer Information System)

- All Bay State/Northern Utilities customers are billed through CIS
- Records all customer revenues and volumes
- Tariff and CHOICE customers are billed on billing cycles while Transportation customers are billed in a calendar month (this comes through CIS on a one month lag)

Tariff Sales

- Sales Service
- Billed by CIS
- Company provides both commodity (cost of gas) and delivery service to the customer

Transportation Service

- Traditional Transportation & CHOICE (Marketers)
- Customers obtain their own supply of gas (from a Marketer) but Bay State delivers the commodity
- Gas sometimes obtained from the Marketer at a cheaper rate than the average
 CGA (Cost of Gas Adjustment) rate the rate at which Bay State sells it's gas for
- Customers who use over 250,000 (Mass) or 85,000 (NH & ME) Therms a year are daily metered (mostly the Marketers)

CHOICE Program

- Customer may select their supplier of gas from participating marketers.
- Bay State/Northern Utilities still obligated to serve if the Marketer cannot deliver (provider of last resort).
- Customer eligibility: customers using less than 250,000 (Mass) & 85,000 Therms per year.
- ME is the only Northern jurisdiction in which customers are daily metered.
- Customers are billed all service charge rates (base rates) and all applicable LDAC rates.
- Customers are billed on a normal billing cycle through the CIS system.

CHOICE Marketers

- In New Hampshire, suppliers are required to pay per customer fees for billing and administration.
- Marketers can be subjected to penalties for under-delivery, banking imbalances, etc. Neither Maine nor New Hampshire is allowed to retain any of the transportation penalties. All penalty revenue is to be passed-back (or recovered from) the customer.

Billing

- Customer Charge flat amount billed monthly regardless of usage
- Base Rate reflects cost of service; this is where we are allowed to make a profit, though not much (typically around 12%)
- CGA rate recovered from customers \$1 for \$1; no profit

 GAF (Gas Adjustment Factor) – broken down between demand and commodity

3 Northern Utilities, Inc. New Hampshire Division Attachment Staff 1-3(b) Page 3 of 26

- All billed information is manually entered into the General Ledger from CIS (Schedule 15 KBMCJ91-NIP2)
 - Total Billed Amount is:
 DR 142 Accounts Receivable
 CR 480/481 Tariff/CHOICE Revenue
 CR 484 Transportation Revenue

NORTHERN UTILITIES RECOVERIES:

RJ Journal 2007 - - Maine and New Hampshire Recovery of Gas Costs

The RJ 2007 journal records the recoveries for both New Hampshire and Maine. There are two key input elements for the recoveries voucher: 1) CGA recovery rates per Regulatory Accounting – updated twice a year for the peak and off-peak filings (unless an interim rate filing is made) and 2) billed volumes from CIS – WD3 – Access Reports.

Volumes are inputted from the Access Reports on the NH and ME Sales Summary tabs. Rates are populated on the proper NH and ME rates tabs.

RJ Journal 2095 - - GAF/DAF Recovery Adj.

The purpose of the GAF/DAF Recovery Adj. journal voucher is to adjust the calculated recoveries to what was actually billed through the CIS billing system for the month. CIS billed recoveries are input into the Excel spreadsheet per the Access output by rate schedule (Schedule 15). The calculated recoveries are then inputted from what was recorded on the RJ 2007 journal.

NOTE: This journal cannot be completed until CIS (Schedule 15) and RJ 2007 has been completed and posted to the GL.

NORTHERN UTILITIES HEDGING ON GAS COSTS:

Hedging - - Method of minimizing price change. Since the movement of cash prices is usually in the same direction and about in the same degree as the movement of the present prices of futures contracts, any loss (or gain) resulting from carrying the actual merchandise is approximately offset by a corresponding gain (or loss) when the contract is liquidated. For more Hedging information see Hedging documentation (below).

RJ Journal 2000 - - FPO Deferred Entry

This journal entry records the current month hedging realized gains/losses as well as the current month hedging expenses and interest. For accounting purposes, these events need to be recognized in the month they occur. For regulatory purposes, the current month transactions relate to the following month purchase of gas. Therefore, the accounting group records the events on this journal in a reversing entry at a summary level.

If the dollar amount is Positive then the entry will be:

Debit 05BS-513605-034103 (Margin Deposit) Credit 05420-519140-030905 (Deferred Hedging Costs)

If the dollar amount is Negative then the entry will be:

Debit 05420-519140-030905 (Deferred Hedging Costs)

Credit 05BS-513605-034103 (Margin Deposit)

RJ Journal 2005 - - Maine and New Hampshire Monthly Hedging ActivityPage 6 of 26

In order to keep the cost of gas at a consistent level, the Commissions in both Maine and New Hampshire require the hedging of gas purchases. Each month a statement (P&L Report) is received from Risk Management Analyst (WD 1) showing the gains and losses as well as all the activity costs associated with these transactions. The profit (or loss) and associated fees are recorded. Note that the company is using shortterm debt to finance these transactions, and the customers are charged back at the monthly short-term (Money Pool) interest rate for the cost of these transactions. This rate is obtained from the treasury end-of-the-month reports for the short-term borrowing funds. Costs are split using the current month's Commodity Allocation factor calculated in JE 2009. Total Gas Cost (Sch. 27) impact is to be keyed into the input tab of the RJ 2009 Excel file.

Northern Utilities - New Hampshire

FPO Futures Margin Account Detail

Financial Hedge Accounting:

We are required to front money to a brokerage account. The intent of this account is to cover losses resulting from futures transactions.

DR 136 Temporary Cash Investments

CR 131 Cash

A nominal transaction fee is incurred when the Company enters a Futures deal: DR 807 Purchased Gas Expense

CR 136 Temporary Cash Investments

Interest is earned monthly on the brokerage account: DR 136 Temporary Cash Investments CR 807 Purchased Gas Expense

When the futures contract is settled for a gain, the following occurs: DR 136 Temporary Cash Investments

CR 807 Purchased Gas Expense

When the futures contract is settled for a loss, the following occurs: DR 807 Purchased Gas Expense
CR 136 Temporary Cash Investments

When the balance in the brokerage account needs to be increased, a "margin call is issued" and the following entry occurs:

DR 136 Temporary Cash Investments

CR 131 Cash

NOTE: Each month before the futures contract settles, accounting is required to record a MTM entry (SFAS 133). This is not booked to the Over/Under (191) account but rather a regulatory asset/liability account (182/254) until the contract is settled.

NORTHERN UTILITIES OFF-SYSTEM SALES:

RJ Journal 2004 - - Maine and New Hampshire Off-System Sales

Off-System Sales - - Any point not on, or directly interconnected with, a transportation, storage, and/or distribution system operated by a natural gas company within a state.

This journal records the special deals revenue for the month. This information is provided in a spreadsheet received monthly from ESS/Gas Supply Analyst (WD 2). Neither ME nor NH get to keep any of the revenue from special deals. All revenue is credited to Gas Costs based on the current month's Commodity Allocation Factor spits. Special Deals include Off-System Sales, Asset Manager Deals, and Tank Rental Deals. RJ 2004 is located in the RJ 2009 Excel file – due to Gas Cost splits and links.

NORTHERN UTILITIES GAS COST ESTIMATE:

RJ Journal 2009 - - Maine and New Hampshire Gas Cost Estimate for the Current Month

The purpose of this journal is to record the monthly gas costs for NH and ME. This includes all current month natural gas purchase estimates, inventory (including LNG, LPG and underground storage) and related financing charges.

Note: NH bills in THERMS and records in DTH. ME bills in CCF and records in MCF.

ONLY cells in **BLUE** font in the RJ 2009 Excel file are inputs. All other cells are links or calculations.

INPUT Tab -

<u>Inputs</u>	Source	<u>From</u>	Day

ALLOCATED VOLS Tab -

This tab in the file calculates the current month's split of Commodity Gas Costs between the two Northern Utilities divisions – Maine and New Hampshire. The split is derived using the calculation below:

Current Month Total Gas Cost Recovery Volumes

Plus: Company Use Volumes

Plus: Company Managed volumes from invoice detail (NH only)

Less: Interruptible Volumes

Plus: Unaccounted For Estimate (NH – 1% and ME 2%)

Input total New Hampshire recovery volumes (DTH) and total Maine recovery volumes (MCF) per RJ 2007 Recoveries journal (Sales Summary Tabs). The BTU Factor is linked to the INPUT tab – this is used to convert Maine's MCF to DTH.

SENDOUT ALLOC % Tab -

This tab is contains a history of the allocation factors (both variable (commodity) and fixed (demand)). Each month, a new line is created and the percentages are linked to the Input Tab.

SUPPLY:

DEMAND and COMMODITY GAS COST ESTIMATE Tabs -

Gas Cost estimates are supplied via e-mail by Energy Supply (ESS) Analyst on WD 2 in PDF format. Costs are inputted into the Demand and Commodity tabs by Gas Cost account.

NOTES:

- 1) LNG Purchases (679927 as shown on the PDF Gas Cost Estimate-to-Actual) are not inputted into the estimate tabs. Current month LNG purchases are recorded to LNG Inventory (516452). See LNG Inventory write-up below.
- 2) LNG Purchases estimate/actual (dollars only) are to be subtracted from the Distrigas Supplier Commodity estimate (679925) as the purchase is recorded to Inventory (516452 LNG). From the Accounting analysis of the Distrigas estimate, it has been discovered that the Distrigas Supplier Commodity estimated costs for the month include the LNG purchase. Volumes are not impacted. The LNG purchase (both volumes and dollars) can be found in the estimate e-mail from Maureen.
- 3) DO NOT ENTER THE GRANITE ESTIMATES as per the Gas Supply PDF estimates. The Granite estimates are linked to the GRANITE BILL tab, which is received from Pipeline Accounting.

Input the Prior Month's true-up (adjustment-to-actual) as recorded on RJ 2001 for each Gas Cost account. This can be done by Lawson GL 90, GL 290 or retrieving the hardcopy of the journal.

Northern Utilities, Inc. New Hampshire Division Attachment Staff 1-3(b)

Once CIS has been posted (WD 3), input the Company Managed dollars into the proper cells. This can be done by Lawson GL 90 or GL 290.

NOTE: Company Managed is posted through CIS on a one month lag.

Capacity Release/Capacity Mitigation (679943) for New Hampshire - the company is to retain a portion of these costs associated with Capacity Mitigation. This amount can be found on the supporting worksheet of the Capacity Mitigation Invoice Summary.

GRANITE BILL Tab -

Granite is an affiliate pipeline of the Bay State Companies. The Granite Bill tab is a duplicate of the Granite Bill received via e-mail from Pipeline Accounting. Input all volumes and costs as shown on the Granite Bill.

Gas Cost Estimate Entries:

DR 67XXXX or 68XXXX (Gas Cost Expense) CR 523269-1000 (Gas Cost Payable) or 523451 (Granite Payable)

Northern Utilities, Inc. New Hampshire Division Attachment Staff 1-3(b) Page 12 of 26

STORAGE:

Natural gas-a colorless, odorless, gaseous hydrocarbon-may be stored in a number of different ways — on pipeline system, underground in working storage facilities, or as above liquid form above-ground LNG/LPG tanks. Storage acts as a sort of buffer between the pipeline and distribution companies, and the marketers and endusers. The principal owners/operators of underground storage facilities are (1) interstate pipeline companies, (2) intrastate pipeline companies, (3) local distribution companies (LDCs), and (4) independent storage service providers. If a storage facility serves interstate commerce, it is subject to the jurisdiction of the Federal Energy Regulatory Commission (FERC); otherwise, it is state-regulated.

Two of the most important characteristics of an underground storage reservoir are its capacity to hold natural gas for future use and the rate at which gas inventory can be withdrawn-its deliverability rate. Efficient use of storage results in the ability to withdraw gas from storage in order to meet customer demands during peak use periods. Storage also facilitates sales of fixed quantities of natural gas on the spot market during off-peak periods. Northern Utilities use the Weighted Average Cost of Gas (WACOG) method for pricing inventory.

In the past, LDCs have generally used underground storage exclusively to serve customer needs directly. However, some LDCs have both recognized and been able to pursue the opportunities for additional revenues available with the deregulation of underground storage. Northern Utilities manages their facilities such that they can lease a portion of their storage capacity to third parties (often marketers) while still fully meeting their obligations to serve core customers. (Of course, these arrangements are subject to approval by the LDCs' respective state-level regulators.) Such arrangements are known as Asset Management Deals - Michcon. For example, marketers and other third parties may move gas into and out of storage (subject to the operational capabilities of the site or the tariff limitations) as changes in price levels present arbitrage opportunities. Further, storage is used in conjunction with various financial instruments (e.g. futures and options contracts, swaps, etc.) in ever more creative and complex ways in an attempt to profit from market conditions. These facilities can cycle their inventories-i.e., completely withdraw and refill working gas (or vice versa)-more rapidly than can other types of storage, a feature more suitable to the flexible operational needs of today's storage users.

See also Handout #6 - Washington BG Energy 10 prepaid deal.

LPG INVENTORY -

LPG (Liquefied Petroleum Gas) – A gas containing certain specific hydrocarbons which are gaseous under normal atmospheric conditions, but can be liquefied under moderate pressure at normal temperatures. Propane and butane are examples. LPG is manufactured during the refining of crude oil, or extracted from oil or gas streams as they emerge from the ground. At normal temperatures and pressures, LPG will evaporate. Because of this, LPG is supplied in pressurized steel bottles. In order to allow for thermal expansion of the contained liquid, these bottles are not filled completely; typically, they are filled to between 80% and 85% of their capacity. The pressure at which LPG becomes liquid, called its vapor pressure. Northern Utilities currently maintains one LPG storage facility in Portland, Maine.

DR 673500 (LPG Expense Miscellaneous – Electric)
CR 672335 (LPG Fuel Vaporized – Electric)

LNG INVENTORY -

LNG (Liquefied Natural Gas) – Natural gas which has been liquefied by reducing its temperature to minus 260 degrees Fahrenheit at atmospheric pressure. LNG's intended use is for peaking supply requirements. Typically, 100% of the LNG commodity purchases are stored until needed. LNG purchases are made from one vendor, Distrigas. (The current month's LNG purchases are communicated via e-mail from the Gas Supply Analyst.) In addition to the commodity, there is a monthly LNG demand fee paid to Distrigas and trucking charges to Transgas (Transgas invoices are paid by Accounts Payable). (A GL90 or GL290 can be ran in Lawson to obtain the Transgas invoice information.) Northern Utilities uses its own facilities to convert LNG to salable natural gas during peak periods. This process is called vaporization. Boil-off is the unavoidable conversion of LNG to salable natural gas that occurs year-round. It results from the natural heating of the storage units. Northern Utilities captures the boil-off and uses it in system supply gas. Northern Utilities currently maintains one LNG facility in Lewiston, Maine.

NOTE: Per DPU 4240-78-A dated October 17, 1980, NU is permitted to include electricity used in the liquefaction processes in the CGA. This order deviates from the FERC guidelines. Per the order, "fuels and energy sources used in the liquefaction process and the cost of fuels and energy sources used to vaporize should be included in the cost of inventory."

Note: According to FERC guidelines, the 804.1 "Liquefied Natural Gas Purchases" account should include "the cost, including transportation, at point of receipt by the utility, of the liquefied natural gas purchased for the purpose of vaporization and injection into the utility's transmission or distribution system for resale".

UNDERGROUND STORAGE -

Underground Storage is the utilization of subsurface facilities for storing gas which has been transferred from its original location for the primary purposes of load balancing. The facilities are usually natural geological reservoirs such as depleted oil or gas fields or water-bearing sands sealed on the top by an impermeable cap rock. The facilities may be man-made or natural caverns. Northern Utilities maintains three Underground Storage facilities 2 with TETCO (Texas Eastern Transmission Company), 1 with TGP (Tennessee Gas Pipeline) and one Undergound Storage/Exchange facility with Michcon (Michigan Consolidated). Natural Gas is injected into storage April – October and withdrawn from storage November – March.

For Northern Utilities, Underground Storage is priced using the Weighted-Average-Cost-of-Gas (WACOG) method. Injections for the three Underground Storage facilities (2 – TETCO & 1 – TGP) are priced at the current month's average Supplier Commodity rate (less the Michcon Inventory purchase – typically from supplier NJR) found on the Commodity Estimate Tab. Michcon Exchange uses the purchase rate from the applicable supplier for the current month. All Underground Storage/Exchange use the same rate for the pricing-out of transportation charges on injections by using the average Transportation Commodity estimate rate for the current month. Withdraws are priced-out at the current month's WACOG rate.

Underground Storage information is received from Gas Supply Analyst (WD 3). Input injection and withdraw volumes into the Underground Storage Tab.

Underground Storage Entries:

<u>Underground Storage/Exchange (Injection):</u>

CARRYING COSTS ON INVENTORY:

Carrying Costs: Interest forgone on money invested in inventory, storage cost, taxes and insurance.

Northern Utilities recovers carrying costs storage/inventory from its customers through its Gas Costs deferral process. Carrying Costs are calculated as follows:

Current Month's TOTAL Ending Inventory Balance
+ Prior Month's TOTAL Ending Inventory Balance
(Includes: LPG, LNG, Underground Storage/Exchange)
Inventory Subtotal / 2 =

Average Inventory Balance X Current Month's Money Pool rate =

Current Month's Inventory Carrying Costs

Inventory Carrying Costs are split between ME and NH Gas Costs using the Fixed (Demand) Allocation Factor.

Inventory Carrying Cost Entry:

DR 680723 (Interest on Financed Inventory Gas Cost) CR 643107 (Interest Expense Miscellaneous)

INTERRUPTIBLE SALES AND MARGIN:

Interruptible Sales: Low priority service offered to customers under schedules or contracts which anticipate and permit interruption on short notice, generally in peak-load seasons, by reason of the claim of firm service customers and higher priority users. Gas is available at any time of the year if the supply is sufficient and the system supply is adequate. Maine is allowed to retain 10% of profits from Interruptible Sales.

Emergency Interruptible Sales: Per Maine's tariff, Emergency Sales are Interruptible Sales made during the Peak months December- March. Maine is allowed retain all profit margin related with Emergency Interruptible Sales.

RJ 2026 - - Interruptible Revenue Adjustment

Interruptible Sales revenue is posted to the GL from CIS on WD 3. The Interruptible Sales revenue can be found by running a GL 90 or GL 290 on the Interruptible revenue account 648119 – ME and 648150 – NH. This should tie to the actual bill received from Billing Analyst on WD 3 or 4. If the actual bill does not tie to CIS, a separate journal is recorded (RJ 2026 – Interruptible Workpaper) to accrue for any revenue recognized as current month revenue, but not yet entered into CIS.

Northern Utilities, Inc. New Hampshire Division Attachment Staff 1-3(b) Page 19 of 26

Interruptible Accrual Entry (RJ 2026):

DR 648119-ME or 648150-NH (Interruptible Revenue)

CR 514223 (AR Manual)

Note: This is a reversing entry.

After RJ 2026 is recorded, the total revenue is entered into RJ 2009 Interruptible tab (seen on next page). The volumes are also entered into the Interruptible tab from the Actual Interruptible bill Excel file.

On WD 4, the Interruptible Margin Memo is received from Gas Supply Analyst and keyed into the Interruptible tab.

RJ 2009 - - (Continued)

The purpose of the Interruptible tab is to calculated the Interruptible Costs for the month, as well as the Interruptible profit to be retained (this applies to Maine only).

Interruptible Costs are calculated as follows:

Total Current Month Interruptible Sales

Less: Interruptible Margin

Total Interruptible Costs

Interruptible Profit Margin to be retained for Maine is calculated as follows:

Total Interruptible Margin

X 10%

Maine Retained Profit Margin

Interruptible Journal Entries:

Interruptible Costs:

DR 679900 (Interruptible Costs Commodity)

CR 679925 (Supplier Commodity Gas Costs) - Deferred to 191

Interruptible Profits:

New Hampshire - -

DR 680007 (Gas Purchase Interruptible Profits due to Customers)

CR 679891 (Interruptible Sales Margin)

Maine - -

DR 680007 (Gas Purchase Interruptible Profits due to Customers)

CR 679891 (Interruptible Sales Margin)

CR 642175 (Interruptible Profits Retained)

Once all Interruptible entries have been recorded and posted to the GL, the MassCheck Report (131201B) is ran in Lawson to verify that Interruptible entries were properly recorded. If properly recorded, the MassCheck Report totals will be zero.

TRANSPORTATION COSTS:

Transportation Service: The act of moving gas from a receipt point to a delivery point pursuant to a contract between the shipper and the transporter. To the extent the shipper has paid for guaranteed, high-priority capacity in the pipeline, that shipper is entitled to firm service.

The following transportation charges/revenue are recoverable (or are to be passed back) from customers through the CGA (Cost of Gas Allowable) filing:

Cash-In/Cash-Out Firm Standby Gas Supply Service Firm Daily Delivery Service Surcharge Revenue Overrun Penalities Energy Charge Revenue

For Northern Utilities, recoverable/passback transportation revenues are recorded to revenue accounts on the GL by CIS (WD 3). Once CIS revenues are posted, a GL 90 or GL 290 can be ran on the Transportation revenue accounts. The dollars posted to the various revenue accounts are then entered on the RJ 2009 Transportation Elimination tab the **opposite sign** as was recorded to the account. Thus, when the entries are recorded, these dollars are moved to the proper Gas Cost accounts and included in the deferred process.

TRANSPORATION BILLING SUMMARY

September 30, 2007

Transportation Account/Description	N.H.	MAINE	NU TOTAL	MONTH
Firm Standby Gas Supply Service (648402)	\$ -	\$ 12.00	\$ 12.00	Sep-07

Total	\$ (58,399.08)	\$ (25,936.18)	\$ (84,335.26)	

Obtain a copy of the most current NH and ME Income Statement. Intent is to move the Transportation Expense account balances to Gas Costs at the end of each month. In other words, input the opposite sign as is on the Income Statement.

Transportation Costs Journal Entries:
DR/CR 64XXXX (Transportation Revenue)
CR/DR 679849.2000 (Commodity Transportation Gas Cost)
CR/DR 679854 (Demand Transportation Charges)

SCHEDULE 27:

Schedule 27 is a composite of the total gas costs recorded by account for each of the jurisdictions – New Hampshire and Maine. All amounts are linked to other tabs within the Excel file. Schedule 27 serves several purposes: 1) to properly allocated gas costs to the proper 191 accounts for deferral – the Schedule 27 Peak and Off-Peak tabs are linked to the RJ 2010 Deferred Gas Costs workbook; 2) for the audit of NU Gas Costs by Deloitte & Touche external audit and 3) to aid Regulatory Accounting in the reconciliation of Gas Costs in their CGA filings.

Once RJ 2009 has been reviewed and signed-off by Regulatory Accounting (this is a SOX testing requirement), the journal can be keyed into Lawson. After the RJ 2009 journal has been posted to the General Ledger, an Income Statement check is performed by inputting the Total Gas Costs Before Recovery per the Lawson Income Statement into the Schedule 27 Total tab. If all entries have been properly recorded, the difference will be zero. This check verifies that the proper amounts will be deferred to the correct 191 accounts.

The Schedule 27 Adjustment tab is used to link any prior period Gas Cost Adjustment(s) to the proper Schedule 27 Peak or Off-Peak tab(s) as so they can properly be included in the deferral process.

Note: If Gas Costs are misrepresented on Schedule 27 and/or not properly recorded to the General Ledger, then the books will not be Perfectly Deferred.

Perfectly Deferred: Books are perfectly deferred when Total Gas Costs Before Recovery is equal to the Gas Costs deferred to the 191 (680506 – Gas Costs Deferred) – Income Statement check.

Once Northern Utilities is confirmed to be Perfectly Deferred, Financial Planning is notified as so they can perform their Revenue analysis. All Gas Cost information needs to be complete and submitted to Financial Planning for review no later than noon on Workday 5.

NORTHERN UTILITIES DEFERRED GAS COSTS:

RJ Journal 2010 - - Maine and New Hampshire Deferred Gas Costs

This journal voucher is to be completed after RJ 2009 and Gas Costs on Schedule 27 have been verified to tie to total Gas Costs per the Financial Statement.

The Recoveries Input Tab is populated from the recoveries recorded on the Recoveries RJ 2007-CM Recoveries and RJ 2095-CIS Billing Adjustment. The Prime Interest Rate is provided by Regulatory Analyst and the ST Borrowing (Money Pool) Rate is per Treasury.

The Linked CM Gas Costs tab is populated and linked to Schedule 27 Peak and Off-Peak tabs of the RJ 2009 Excel journal file. Update all links in **RED** font and input totals from the Schedule 27 tabs – this is to insure that all links have properly updated.

The P&S and MISC OVHD Project Input tab of the RJ 2010 is populated per the Regulatory projected collections found on the Accounting Rate sheet. These numbers are updated twice a year.

The Deferred Gas Costs tabs for NH and ME are linked to the recoveries, gas costs and projected collections tabs within the RJ 2010 file. The beginning balances for the 191 accounts are entered and verified from GL290's and with the Regulatory reconciliations. This tab is calculating the Over/Under 191 recovery for each 191 account as well as calculating the carrying costs on 191 to be recorded for the month.

The Wrk. Cap. Allowance Calc. tab calculates the Working Capital Allowance for the various 182 Working Capital accounts. Allowance percentages are provided by Regulatory Accounting. Projected collections are updated/linked per the P&S and MISC OVHD Project Input tab of the RJ 2010 file.

The Wrk. Cap. Deferred, Production & Storage Deferred, NH Misc. OVHD Deferred, and Bad Debt Deferred tabs are set up to calculated the Over/Under and Carrying Costs for each of the 182 accounts. Beginning balances are to be updated per GL290's and verified with Regulatory Accounting reconciliation totals. Allowance rates are provided by Regulatory Accounting and projected collections are updated per the P&S and MISC OVHD Projectn Input tab.

NORTHERN UTILITIES ESTIMATED VS. ACTUAL GAS COSTS:

RJ Journal 2001 - - True-up of Estimated to Actual Gas Purchase

Each month gas supply sends out EASY reports which reasonably estimate gas purchases for each month. These reports break down gas costs by account and the expense is recorded accordingly on the RJ 2009. The following month, when actuals are paid, gas supply provides accounting with a copy of the actual invoices and a report from EASY which breaks down the variance between the EASY estimated reports and the actual invoices, by account. Accounting uses the invoices to book the difference of the estimated vs. actual costs to the various gas cost accounts.

NORTHERN UTILITIES INTEREST ON SUPPLIER REFUNDS:

RJ Journal 2025 - - Supplier Refund Interest

NH uses Prime Interest Rate
ME uses Money Pool (Short-term Borrowing) Rate

Recovery is inputted from the calculated recoveries per RJ 2007.

Entries:

Debit 05/(6)420 643107 1120 Credit 05(6)420 524585 0905 Peak Refunds Credit 05(6)420 524586 0905 Off-Peak Refunds

NORTHERN UTILITIES DSM INTEREST & INCENTIVE:

RJ Journal 2029 & 2030 - DSM Interest & Incentive

Demand Side Management (DSM) is a program set up to help reduce customers' usage by improving efficiencies. The NH and ME Commission requires the company to do this program, therefore we are allowed to recover all expenses that are associated with the program as well as a portion of LNR (Lost Net Revenue) that we experience due to the company's efforts to reduce customer usage.

Recovery is inputted from the calculated recoveries per RJ 2007. Incentive amounts are provided by DSM Regulatory Analyst.

Entries:

Debit 932.13 (DSM O&M Expense)
Debit 431 (DSM Interest)

Credit 176.39 (DSM Lost Net Revenue)

NORTHERN UTILITIES RESIDENTIAL LOW INCOME ASSISTANCE PROGRAM:

RJ Journal 2900 - - RLIAP Discount Deferral

This entry is to establish a Regulatory Asset for the 60% reduction in heating base rate for delivery service for the Residential Low-Income Assistance Program for New Hampshire.

Inputs:

NH RLIAP Report - Customers SONP (from CIS) - KLCL06-01 Calculated recoveries from RJ 2007 Invoices recorded by AP (GL 90 or 290) Interest rates per Regulatory Accounting

Entries:

Debit 05BS-518299-4103 (Residential Discount – Regulatory Asset)
Credit 05050-648699-4103 (Residential Discount – Net Revenue)
Credit 05050-643107-1121 (Residential Discount – Interest)

NORTHERN UTILITIES UNCHARGED TRANSPORTATION:

RJ Journal 2805 Uncharged Transportation – Cycle 22

This journal is to record the Uncharged Transportation from Cycle 22. This entry consists of monthly transportation revenue and volumes which were recorded in CIS but have not yet been recorded to the GL due to the Revenue cut-off posting. This entry is reversed the following month when revenues come through CIS.

Input:

Cycle 22 from CIS.

Entries:

Debit 05BS-648410-4102 (Uncharged Transportation) Credit 05BS-517300-3412 (Accrued Revenues)

NORTHERN UTILITIES REGULATORY RE-CLASSES:

RJ Journal 2051 - - 191 Credit Re-class

monthly

This journal entry re-classifies any credit balance regulatory 191 to the liability side of the balance sheet. This entry is made on a quarterly basis.

RJ Journal 2071. Newington Meter Issue - ask Jeff Gore

It could be a marketer. It could be another utility. It 1 doesn't have to be Bay State. MS. MACLENNAN: Okay. 3 MR. DAFONTE: It just happened to work out with Bay 4 State because of the existing agency and exchange agreement 5 that Northern, Bay State, and Granite were part of. 6 Okay, great. Thank you. MS. MACLENNAN: Okay. 7 guess I may as well ask this question even though it occurs to 8 me that it would have been better asked in the acquisition 9 But are there any capacity or commodity contracts that 10 Northern holds that will become stranded, in effect, by the 11 acquisition and spin-off to Unitil? 12 MR. DAFONTE: No, there won't. 13 MS. MACLENNAN: Okay. Good. 14 MS. SMITH: I think you might have asked something 15 along those lines --16 MS. MACLENNAN: Okay. 17 MS. SMITH: -- in the acquisition case. 18 MS. MACLENNAN: Okay. 19 MS. SMITH: You ready to move on to the other? 20 MS. MACLENNAN: Yeah. 21 Tom's here, and --MS. SMITH: 22 MS. MACLENNAN: We're going to move onto the New 23 Hampshire-Maine allocation issue (inaudible) you wanted to sit 24 25 in on.

1

MR. AUSTIN: Oh, okay.

MS. SMITH:

2 3

4

The reconciliation moving -- the adjustment moving three

million to Maine from New Hampshire, and that was the response

5

22

well?

question.

23

24

25

Hampshire. I'm just wondering if -- if that's the reason for this adjustment that you were talking about? MR. GIBBONS: Yes. Okay. Now, maybe this is in part MS. SMITH: Okay. because I was not heavily involved in the case that dealt with

I have one question before we go into

capacity assignment provisions, I guess I was slightly wondering why there's such an impact on the commodity cost allocators, but no impact on the demand cost allocators, and -because in my mind, the capacity assignment meant capacity assignment of capacity on pipelines. But Carol says it also included assignment of some of your actual commodity costs, as

of ADR 1-11, does that have to do -- and the only reason I'm

going to ask this is because I want -- I'm thinking it does

with the capacity allocation issue that we talked about in --

we asked about in data request 1-6, we were asking about the

change in the allocation of the capacity costs, why basically

in the summer months it was so much lower for Maine to New

The --MR. FERRO: No.

I didn't say that. I said there's a MS. MACLENNAN:

1

MS. SMITH: Okay.

2

Should I proceed? MR. FERRO:

3

MS. SMITH: Yes.

4

MS. MACLENNAN: Please. Sorry.

5

The dockets that you're referring to in MR. FERRO:

6

the capacity assignment was just that: capacity. Commodity

7

cost allocations has always based on some assessment of what

the firm send out of the two divisions are, what are the

8

volumes that are being dispatched to each division to satisfy

10

Northern's obligation to provide commodity to its customers.

11

And through the capacity assignment arrangement, it

12

does impact commodity requirements both in Maine and New

13

Hampshire divisions, but became a new requirement, and a

14

significant requirement, with respect to commodity in the Maine division starting in January 2006. And that's because upon the

15

agreement in those dockets, we agreed to satisfy capacity

16 17

assignment with company-managed resources. And company-managed

18

resources provides for sort of a virtual assignment of

19

resources where Northern Utilities dispatches, and therefore,

20

provides the commodity for the suppliers to satisfy their

2.1

customers.

2.2

commodity cost allocation factors between the two divisions

23 24

because some of the volumes, commodity purchases, whether it's

So it obviously flows into the assessment of

25

pulling out of storage MCN for company managed or Duke, DOMAC,

those resources that Northern dispatches is associated with 1 company-managed assignment. So if one is trying to capture the 2 volumes to satisfy firm demand, one has to capture those 3 commodity volumes to satisfy company-managed. 4 MS. SMITH: So just -- so in looking at the 5 allocators, is it actually that the -- because I was looking at 6 it that summer supply was less in Maine. Is it actually that 7 winter supply is more and that's why the allocators are 8 different? I mean, I'm trying to figure out as to why we go 9 from, you know, around 50 percent to 52 percent in certain 10 months to down as low as 30 percent to 70 percent. 11 I'm sorry. Can you tell me what schedule MR. FERRO: 12 13 you're --MS. SMITH: I'm looking at schedule -- it's on page 14 60 of the filing. 15 MR. FERRO: Page --16 The simplified market-based allocators. MS. SMITH: 17 MR. GIBBONS: The winter months would include the 18 estimated company-managed estimates of the allocations November 19 through March. 20 MS. SMITH: Uh-huh. 21 MR. GIBBONS: And then that program ends in Maine 22 from April through October. 23 MR. FERRO: Yeah. The send-out model, Lucretia, has 24 to recognize that it needs to dispatch volumes in Maine to

> BROWN & MEYERS 1-800-785-7505

satisfy company managed, and this schedule reflects that. And 1 certainly you can see that Maine's allocation factors are 2 higher in the winter than in the summer, at least in part due 3 to the company-managed requirements in Maine solely in the 5 winter. MS. SMITH: Okay. 6 MS. MACLENNAN: You can continue if you'd like. 7 need to take a break. 8 MS. SMITH: Okay. 9 MR. GIBBONS: So we put those -- we have to put those 10 costs into the Maine reconciliation, but then those are offset 11 by company-managed commodity credits. 12 MR. FERRO: Excuse me. Off the record, is it okay we 13 continue to --14 MS. SMITH: Yeah, she said to go ahead, so --15 Oh, I'm sorry, I didn't hear that. Okay. MR. FERRO: 16 17 Sorry. MS. SMITH: No, that's all right. I was debating 18 that, as well. Okay, so there's -- I'm trying to get -- where 19 would I see what you just told me? 20 MR. GIBBONS: The credits? 21 MS. SMITH: Yeah. 22 MR. GIBBONS: The credits are -- you would see those 23 on page 38, which is the tariff page. 24 25 MS. SMITH: Okay.

MR. GIBBONS: The volumes associated with that 1 assigned transportation is included and is reflective of the --2 Okay. So that \$2 million that's assigned 3 MS. SMITH: to -- that's on the first line, that's peak demand? 4 5 MR. GIBBONS: Yes. MS. SMITH: And then there's 12 million assigned 6 transportation costs that's commodity? 7 MR. GIBBONS: Yes. 8 MS. SMITH: Okay. So the allocator is allocating 9 more dollars to Maine, but then when we go through the tariff 10 pages and are assigning it to classes, some of those dollars 11 are being assigned to the transport customers; is that correct? 12 13 MR. GIBBONS: Yes. MS. SMITH: Okay. 14 MS. MACLENNAN: Sorry. 15 That's all right. So what happened with MS. SMITH: 16 the reconciliation? I guess I'm -- we've moved three million 17 to Maine from New Hampshire. 18 MR. GIBBONS: The original -- when the costs came 19 through originally, the allocation did not reflect the fact 20 that these costs had to be assigned to Maine November through 21 March because the credits were coming through also to offset t 22 hose. You were getting the credits but you weren't getting the 23 up-front costs associated with that. The gas that was being 24

> BROWN & MEYERS 1-800-785-7505

assigned through the company-managed program --

1

MS. SMITH: Uh-huh.

2

MR. GIBBONS: -- was not getting -- it was not being

MS. MACLENNAN: I'm sorry, if I cover ground you've But you're probably not surprised that we already covered. were surprised to see such a large dollar amount suddenly appear in your reconciliation without much explanation. Was it that the company overlooked this particular part of the calculation --

> MR. GIBBONS: Yes.

MS. MACLENNAN: -- January '06 to the present?

It did not get in -- winter '07-'08 it MR. GIBBONS: did not get into the calculation of the allocation.

MS. MACLENNAN: So it's a one-season error?

MR. GIBBONS: It did not -- you were receiving the credits but the costs were not in on Maine's books. You were only receiving the credit side of things.

MS. SMITH: Let me just see if -- because this will bring -- hopefully bring Carol up to date but will also make sure I understand what was just stated. The allocation to Maine in total the allocators are higher because of the Maine send out because of the assignment of capacity management is higher. But when it goes -- comes to the allocation to actual customers on the tariff sheet, some of it is assigned directly to transport customers so, therefore, those costs aren't being assigned to the sales-only customers. Is that correct?

2.3

MR. FERRO: Yes. As it was last year -- if you look at last year's winter cost of gas, just what you say, Lucretia, that is, we back out the associated costs of commodity and capacity to the capacity assigned customers, and the net is charged to sales customers. But then when we -- as we proceeded in that period in the real world, we bill the supplier for company-managed resources. Some of is capacity, some is commodity. That is credited through the cost of gas in our accounting.

But when we were taking a look at the send outs, say, in November '07 or December '07 and we were assigning total Northern commodity costs to the Maine division and the New Hampshire division, we were developing allocation factors that excluded Northern's requirement to send out gas to satisfy company-managed resources to the transportation customers of Maine. And once Ron discovered that, we had -- we had to reverse the calculation. And what Ron was saying is the credit really is the charges that we bill the suppliers and ran that revenue through the cost of gas in the Maine division, that's the credit. The cost side of it is just allocating commodity costs to the Maine division associated with that requirement. That's what was not being done, the allocation of commodity costs associated with that requirement in the Maine division.

MS. SMITH: So if I were to look at the allocation 1 2 tab in my filing from last year, which is still in my office, as is every filing since I've been here, I would not see this 3 differential that I'm seeing this year? 4 MR. FERRO: You should not. If we modeled this 5 correctly last year, you should --6 7 MS. SMITH: Or you modeled incorrectly? No, I don't think we modeled it 8 MR. FERRO: 9 incorrectly. (Inaudible). 10 MS. SMITH: We modeled it correctly. We accounted it 11 MR. FERRO: for it incorrectly, if you will. We modeled -- I think the 12 person who runs out send out model, he did not --13 MR. GIBBONS: I think you would see these same 14 15 allocations last year. MR. FERRO: That's the point I'm making. 16 17 right. MS. SMITH: Okay. 18 That's right. That's the point making. 19 MR. FERRO: He modeled it correctly and, therefore, he was -- he was 20 satisfying company-managed resources last year. So on a 21 projected basis, they're not forecasts. The commodity 22 allocation factor should have represented reasonably accurate 23 assessment of the split. 24

> BROWN & MEYERS 1-800-785-7505

Okay.

MS. SMITH:

MR. FERRO: But then when we accounted for it in the 1 2 real world, actual basis, we did not reflect the company-3 managed commodity requirements in the Maine division by way of allocating total Northern commodity requirements. 4 5 commodity allocation factors did not recognize the additional 6 Maine demand for company-managed resources. 7 MR. JORTNER: Was there a reciprocal error made in 8 the New Hampshire filing or was this only an error made in the Maine filing? 9 MR. GIBBONS: No, a reciprocating amount was in New 10 Hampshire. 11 12 MR. JORTNER: So you had to correct the New Hampshire 13 as well? 14 MR. GIBBONS: Yes. Now --By the same exact amount? 15 MR. JORTNER: Yes. Now, you would not have seen the 16 MR. GIBBONS: adjustment line in the reconciliation in the prior winter. 17 Let's say the accounting department makes the allocation 18 19 calculation based on actuals. They do not use these allocators 20 21 MS. SMITH: Okay. MR. GIBBONS: -- when they post commodity costs. 22 23 MS. SMITH: Okav. 24 They use the actuals. So, therefore, MR. GIBBONS: 25 if the company managed were taken under consideration when the

allocations were made originally, coming through this winter, there would be no need for the reallocation line because that 2 \$3.2 million in costs would be spread throughout the commodity 3 costs on the reconciliation. You would not see a line for an 4 extra allocation because of the company-managed and all that. 5 MS. SMITH: Okay. 6 MR. GIBBONS: They would be -- it would be included 7 in the allocation amount and they would be spread amongst --8 9 MS. SMITH: Because --MR. GIBBONS: -- costs. 10 MS. SMITH: -- because they would have used these 11 percentages or something along those --12 MR. GIBBONS: Something similar. 13 MS. SMITH: -- percentages in booking it? 14 MR. GIBBONS: Something similar to that. 15 MS. SMITH: Something similar to that? 16 17 MR. GIBBONS: Yes. MS. SMITH: So instead what they used to book it did 18 not reflect the company-managed that's being added for Maine; 19 20 is that --21 MR. GIBBONS: Not originally. MS. SMITH: Not originally, which caused the need of 22 the \$3 million reconciliation. But is it -- I guess I'm trying 23

25

2.4

to figure out is it really a reconciliation as so much that

it's a -- if the accounting had been correct each month, you 2 know, your build up, you're saying we wouldn't have seen --MS. MACLENNAN: The correction. 3 MS. SMITH: It's a correction within that so that you 4 5 didn't have to go back and recalculate each month's? MR. GIBBONS: Right, it was just --6 7 MS. SMITH: Is that really what it is? MR. GIBBONS: Yes, it would have just flowed through 8 9 as it usually does. So it's more that the individual 10 MS. SMITH: Okay. months on the sheets weren't accurate, not that we're getting 11 \$3 million of costs that New Hampshire paid for in a prior 12 13 period. No. And it was done in this MR. GIBBONS: No. 14 manner -- I made the decision to do it in this manner to 15 preserve the audit trail --16 MS. SMITH: Okay. 17 18 19

20

21

22

23

24

25

MR. GIBBONS: -- for when you do the audit because if you were to look at the allocated cover sheets and the invoices and such, you will see allocations like what is in the reconciliation. If I'd gone through and put the correct allocations on the spreadsheets and re-spread the dollars and made it look like you're accustomed to seeing, if you went and looked a the allocations between the two jurisdictions, two divisions --

MS. SMITH: Okay. 1 MR. GIBBONS: -- it wouldn't have tied out. 2 total costs to Northern are the same as the split between the 3 two. So --And the split between the two is really -MS. SMITH: 5 - really what was estimated close to what -- other than, you 6 know, the changes in costs and things, but the theory behind in 7 the end is what was estimated when you made the filing for 8 2007-2008 winter period? 9 MR. GIBBONS: Yes, it should be. 10 MS. SMITH: Okay. 11 MS. MACLENNAN: Just so I fully understand. 12 I understand the basic explanation for -- which is that Maine 13 has a higher percentage of managed resources assigned to 14 suppliers than does New Hampshire? 15 MR. GIBBONS: Yes. 16 MS. MACLENNAN: So there has to be a -- in your 17 calculation of commodity allocation by jurisdiction, you have 18 to somehow add in, for this one category of commodity, that 19 20 difference? MR. GIBBONS: Yes. And if you look at the 21 reconciliation on page 136, two-thirds of the way down, you'll 22 see company-managed propane which really is company-managed 23

> BROWN & MEYERS 1-800-785-7505

across, you'll see a \$3.9 million credit. The credits were --

peaking resources or just company managed, and follow that

24

are already in the commodity cost schedule. And those are not 1 Those are division-by-division actual credits. 2 allocated. Those are not part of the allocation process. 3 MS. SMITH: What page did you say, Ron? 4 136. 5 MR. GIBBONS: I have it now. 6 MS. SMITH: Okay. 7 MR. GIBBONS: 13 lines up or so. MS. SMITH: 8 Okay. The three million nine dollar number 9 MR. FERRO: 10 right, Ron? 11 MR. GIBBONS: Yes. MS. SMITH: Yeah. 12 MS. MACLENNAN: This seemed to come out of the blue 13 for me and it could be my faulty memory, but I don't -- didn't 14 think I recalled a discussion during the negotiations of the 15 allocations between states for capacity assignment including 16 this item, that there would be an acknowledgment of different -17 - I understand the logic but it wasn't something that rang a 18 Is that because I overlooked it or is this 19 bell for me. something that sort of bubbled up to everyone's -- New 20 Hampshire's consciousness so the company is accommodating it, 21 22 let's say.

MR. FERRO: No. You didn't overlook it. It was not an issue because this was a capacity-related docket, and no one

25

23

was proposing to change the methodology of allocating commodity 1 2 costs --MS. MACLENNAN: Okay. 3 MR. FERRO: -- which is based on each division's firm 4 send out requirements, volumes/commodity requirements. 5 that was not of issue. 6 7 MS. MACLENNAN: Okay. So this has really evolved out of the CGF commodity aspect? 8 MR. FERRO: That's correct. 9 MS. MACLENNAN: And -- but was it brought to your 10 attention by the New Hampshire staff, say, in last year's --11 last winter's CGF or this winter's CGF or did you just discover 12 it, think it through yourselves? 13 MR. FERRO: I'll let Ron speak --14 MS. MACLENNAN: Okay. 15 MR. FERRO: I mean, we haven't even discussed this 16 with New Hampshire. I mean, this was discovered by Ron 17 18 recently. 19 MS. MACLENNAN: Okay. MR. GIBBONS: I discovered it doing the 20 reconciliations because I had an enormous over collection in 21 Maine, and a -- and a very large under collection in New 22 23 Hampshire. 24 MS. MACLENNAN: Okay. MR. GIBBONS: So that's how it came to light. 25

1 MS. MACLENNAN: I see.

MR. FERRO: Carol, you might not need this simple illustration and I think you understand it, but very simply, if we had a hundred dollars worth of commodity costs, and without reflecting the company-managed requirements in the Maine division, we allocated only 40 percent of that hundred dollars to Maine and 60 percent to New Hampshire and then realized the 60/40 split should have been 50/50 if we reflected company-managed resources.

MS. MACLENNAN: Uh-huh.

MR. FERRO: That instead of \$40 being allocated to Maine, we should have allocated \$50 to Maine; instead of 60 to New Hampshire, 50 to New Hampshire. That's the \$10 adjustment that he's providing there.

MS. MACLENNAN: Okay.

MS. SMITH: And the reason it's done in one lump sum is for the audit trail, so we didn't have to ask him every month why is this number different, why is this number different, so we have -- all the numbers will match how they accounted for it.

MS. MACLENNAN: Uh-huh.

MS. SMITH: And then they'll have the one true up, which reflects how it was proposed in last year's filing.

MS. MACLENNAN: Just a question on why Maine has more 1 2 company-managed assignment to suppliers than New Hampshire. 3 that --MR. FERRO: Well, two fold. 4 MS. MACLENNAN: Okay. 5 MR. FERRO: Certainly the unique provisions in the 6 7 Maine capacity assignment is that we provide them with capacity only in the five months of November through March --8 9 MS. MACLENNAN: Uh-huh. MR. FERRO: -- while in New Hampshire it's year 10 round. But secondly that all capacity assignment and, 11 therefore, all capacity requirements that the suppliers need in 12 Maine are satisfied by company managed, while in New Hampshire 13 a good share of it is long-haul pipeline, as well as some 14 company-managed storage and peaking. 15 So it's the entire requirement in Maine is satisfied 16 by company managed while just a portion of New Hampshire's 17 requirement is satisfied by company managed. 18 MS. MACLENNAN: And -- and why is that, again, Joe? 19 Is it -- why isn't company-managed divided between the states 20 equally? Why is there a particular designation of only company 21 managed to Maine and a portion of New Hampshire's overall to 22 New Hampshire? 23 MR. FERRO: Well, like any other requirement, you 24 look at New Hampshire's firm demand --25

MS. MACLENNAN: Uh-huh. 1 2 MR. FERRO: -- sales and company assignment, and 3 Maine's firm demand, firm sales, and company -- and -- and -and capacity assignment, excuse me. And so when you add -- if 4 you isolate the pieces, the capacity assignment piece in Maine 5 is made up of different -- solely company managed, a different 6 7 component that New Hampshire. It has pipeline and a little 8 company managed. 9 MS. MACLENNAN: But I'm asking why. MR. FERRO: It's the tariff provisions in both --10 11 both divisions; that is, New Hampshire gets a slice of the system every month --12 13 MS. MACLENNAN: Okay. MR. FERRO: -- while we had agreed upon, settled upon 14 15 in Maine --16 MS. MACLENNAN: Okay. 17 MR. FERRO: -- that they don't get a slice. They get specific resources. 18 19 MS. MACLENNAN: Okay. Good. That's all I was 20 getting at. 21 MR. FERRO: Okay. MS. MACLENNAN: Sorry I didn't remember that. 22 23 MR. GIBBONS: Well, the agreement also -- New Hampshire had a cut off back in '02 --24

That's another element to this --

BROWN & MEYERS 1-800-785-7505

25

MR. FERRO:

MR. GIBBONS: -- '03, whereas Maine was --1 2 MR. FERRO: Right. MR. GIBBONS: -- 50 percent of the firm 3 transportation. 4 That's another element to this but that's 5 MR. FERRO: -- that is just who was assigned capacity and who was not. 6 in New Hampshire I believe it was March 2001 grandfathered 7 date; that is, all customers who switched to transportation 8 service after that date was non-grandfathered or capacity 9 10 assigned while the prior ones were. MS. MACLENNAN: I remember that. 11 MR. GIBBONS: And the Maine division credits are much 12 larger than the New Hampshire division credits. 13 MS. SMITH: So you have certain pipeline, gas, if you 14 will, that New Hampshire transportation customers or commodity, 15 they get a slice of that. How are -- and that's not at all 16 reflected in any of these allocation factors or anything like 17 that? What I'm trying to figure out is we have total Northern 18 19 costs --Right. 20 MR. FERRO: MS. SMITH: -- which include -- are those costs of 21 that pipeline supply in that total Northern cost? 22 MR. FERRO: There's no commodity assignment 23 associated with those resources --24

> BROWN & MEYERS 1-800-785-7505

Okay.

MS. SMITH:

1	MR. FERRO: both in Maine well, Maine doesn't
2	get any capacity assignment, but New Hampshire there's we
3	just release the capacity to the suppliers to satisfy their
4	long-haul pipeline needs.
5	MS. SMITH: Okay.
6	MR. FERRO: They buy their own gas. We don't
7	dispatch for them or buy gas. So that's not part of Northern's
8	send out.
9	MS. SMITH: Okay.
10	MR. FERRO: That's what we're trying to capture here,
11	Northern's send out requirements. And only company managed
12	affects Northern's send out requirements.
13	MS. MACLENNAN: Great. Now this makes sense. Thank
14	you. Do you have any questions?
15	MS. SMITH: Well, that's wasn't as painful as I
16	expected it to be.
17	MS. MACLENNAN: No.
18	MS. SMITH: I don't know that I have anything else on
19	the cost of gas stuff specifically.
20	MS. MACLENNAN: When are you going to move to the ERC
21	
22	MS. SMITH: Oh, the ERC questions. On ADR number 1-9
23	and 1-10
24	MS. FRENCH: Sorry that it didn't occur to me to
25	bring him up here.
