Subject: Maintain support for net metering in New Hampshire

The benefits for distributed solar energy are many ranging from avoided long term costs of generation capacity to environmental benefits of reduced carbon dioxide and sulfur dioxide.

More importantly distributed solar energy is the future. Distributed solar energy should be encouraged so that the inevitable occurs sooner rather than later. As a rooftop solar array owner, I see net metering as the single largest incentive to distributed solar energy development. This development which ends up in the hands of private citizens gives them a stake in New Hampshire energy future.

Please continue net metering. Make New hampshire a leader in solar energy development.
