# NH Energy Efficiency Resource Standard <br> (Targets Discussion) 

August 13, 2015

## Guidance From Commission's Order of Notice

- Establish an EERS - a policy to establish specific targets or goals for energy savings that utilities must meet in New Hampshire
* Requires electric and/or natural gas utilities to achieve, within short- and long-term time frames, energy-type-specific levels of customer energy savings (efficiency goals)
- Based on sales volumes for the baseline year of 2014

## Long-Term Targets

Set long-term vision/target: Ultimate objective of attaining all achievable, cost-effective energy efficiency over time

* Long-term vision as a guidepost
* Signal to the marketplace - energy efficiency is part of a sustained, long-term strategy
* Actual long-term target could be set, if necessary, based on an updated NH Potential Study completed during the $1^{\text {st }}$ Energy Efficiency Plan cycle completed under the EERS (targets based on delivery sales volumes for 2014)
- Ten-year horizon (2017-2027)
- Statewide electric kWh savings target - electric utilities combined
- Statewide natural gas MMBtu savings target - natural gas utilities combined
- Each utility contributes to the statewide target based on the unique characteristics of its customer/member base

## Short-Term Targets

Set short-term targets: Based on demonstrated performance and the level of funding available with the objective of attaining all achievable, costeffective energy efficiency over time

* Specific, measured savings targets within an appropriate planning horizon
* Statewide electric kWh savings target - electric utilities combined
* Statewide natural gas MMBtu savings target - natural gas utilities combined
* Each utility contributes to the statewide target (individual utility targets)
* Targets based on delivery sales volumes for 2014
* MMBtu savings from other fuels incorporated in Program Plans and reported in the form of benefits
*Three-Year Plan (2017-2019) - Meets ACEEE guidelines
* Must strike balance between:
- All achievable, cost-effective energy efficiency that can be attained during the period
- Capability of the program delivery channel network to support increased activity
- Bill impacts resulting from increased energy efficiency

## Electric - Illustrative Annual Program Cost*

## Actual 2014 Statewide Program Statistics

Annual Cost to Achieve ( $\mathbf{\$} / \mathrm{kWh}$ ) = \$0.42
\% Savings to Delivery Sales $=0.62 \%$
MWH Delivery Sales = 10,770,751
MWH Savings $=66,646$
Total Expenditures $=\$ 28.25 \mathrm{M}$
